

# Assign the appropriate translate5 roles to your users in Azure

You can assign the translate5 roles for your users directly in Azure. If Azure transfers roles for your users to translate5 (as it does with the above configuration) translate5 will set these roles with each login via Azure in translate5 - and change existing roles for the user and ignore the roles that are set for the OpenID configuration for the corresponding client in translate5.

**Please note: Signing in via Azure with the following steps does only work for normal users in Azure, not for Guest users. Maybe there are some tweaks in Azure that allow it for Guest users as well - if someone finds out please add to this documentation.**

MARC'S TRA...	0

Click on "Total Users" to assign existing Azure Users as users that are allowed to use translate5

Microsoft Azure

Search resources, services, and docs

Home > Enterprise applications - All applications > Marcs Translate5 - Overview > Users and groups

### Users and groups

Marcs Translate5

+ Add user Edit Remove Update Credentials Columns

The application will appear on the access panel for assigned users. Set 'visible to users?' to no in properties to prevent this. →

First 100 shown, to search all users & groups, enter a display name.

DISPLAY NAME	OBJECT TYPE	ROLE ASSIGNED
No application assignments found		

Click on "Add user" - please note: This user must already exist inside of Azure ActiveDirectory AND it MUST NOT be a guest user. Family name and firstname should already be defined for this existing Azure user as well as the email. Azure does not allow to define a gender for a user - therefore all users will be assigned female gender in translate5, which is translate5 default.

Microsoft Azure

Search resources, services, and docs

Home > Enterprise applications - All applications > Marcs Translate5 - Overview > Users and groups > Add Assignment

### Add Assignment

### Users and groups

Marc's Translate5

+ Add user Edit Remove Update Credentials Columns

The application will appear on the access panel for assigned users. Set 'visible to users?' to no in properties to prevent this. →

First 100 shown, to search all users & groups, enter a display name.

DISPLAY NAME	OBJECT TYPE	ROLE ASSIGNED
 Max Mustermann	User	InstantTranslate user in translate5

Attention: To add another translate5 role for the same user, you have to click again on "Add user" and repeat the previous steps for the same user with the additional role (in this case again for "Max Mustermann" with e.g. the role "translate5 editor"). This is counter-intuitive, but is the way, Azure ActiveDirectory works.

Now the settings in Azure ActiveDirectory are complete. Proceed with the settings in translate5.
