

ZIP import packages: Examples

Please visit the page "[ZIP import package format](#)" for an explanation of zip package file structure.

Please note: translate5 project strives to support the [TIPP format as import and export format](#). Any kind of support for this development is welcome.

The simplest and smallest examples (SDLXLIFF)

[example-simple-task.zip](#)

[example-task.zip](#)

The standard example (SDLXLIFF)

This standard example includes all import-specific features, that are usable for SDLXLIFF.

[example-task-with-relais-reference-terminology-customMQM-en-de.zip](#)

CSV example with custom MQM issue types

MQM (Multidimensional quality metrics) is a standard way to mark translation errors on subsegment level.

[example-task-CSV-with-customMQM-en-de.zip](#)

CSV example with multiple target alternatives

Multiple target alternatives are especially useful in MT-research.

[example-task-CSV-with-multiple-target-alternatives.zip](#)

CSV example with protecting arbitrary strings as internal tags

Please visit the [page about CSV string protection](#) for a detailed explanation of used import features.
