

# "Commenting only" for a workflow role

To achieve, that a certain workflow role (or even user) is only allowed to comment segments in translate5 but not allowed to edit them, the following workaround can be used:

translate5

Authenticated user: Project Manager  
Login name: manager

Task Overview

Actions Add Task Refresh

Properties to task "example-task-with-relais-reference-terminology-customMQM-en-de"

Associate users to task Associate language resources Analysis Workflow-properties Other properties Events

Add user Remove user Refresh Notify Proofreaders

Edit user "Manager, Project (man..."

User	Role	Status
Manager, Project (manager)	proofreader	open

Assign a user to a certain workflow role

Save Cancel

translate5

Authenticated user: Project Manager  
Login name: manager

Task Overview

Actions Add Task Refresh

Properties to task "example-task-with-relais-reference-terminology-customMQM-en-de"

Associate users to task Associate language resources Analysis Workflow-properties Other properties Events

Workflow: Default workflow

Add entry Delete entry Refresh

Create entry

Workflow step	User	Columns (...)	Edit only ...	Anonymised	Visibility
Default entry	Default entry	2 (2)	No	No	show

Switch to workflow properties and create a new definition entry for a certain workflow step ("editing" equals "proofreading")

Check "Edit only MQM-tags"

Save this configuration

Workflow step: Editing

User: for all

☒ Edit only MQM-tags

☐ Anonymised target columns

Available columns

☒ Source text ☒ Target text

Visibility of the non editable target columns

☒ Show

☐ Hide

☐ Not available

Afterwards any user with the reviewer role can not edit any segments, but still can add comments.
