

TrackChanges

TrackChanges is a paid [plug-in](#).

In the Editor:

- MS Word style track changes
- different background colors for different users
- Changes are recorded across all workflow steps that translate5 offers

Changes are NOT tracked:

- in the first step of a translation
- when no workflow is set and there are empty targets in the task.

After opening a task, the view-mode offers a button "Display tracked changes" to switch the view of the TrackChanges on and off.
