TermImport

Category	backup
Purpose	Imports terminology via API call or call of the import-URL in the browser
Bootstrap Class	editor_Plugins_TermImport_Init
Type	Core plug-in (delivered with translate5 core)

The import origin can either be the filesystem, crossAPI or remote SFTP directory

For further documentation on how to use it, please see the REST API documentation of the TermImport Plug-in. and TermImport: SFTP support

Activation and configuration

1. Activate the TermImport-Plugin, as shown here
2. Ensure, that the directory
   yourTranslate5InstallationRoot/data/tbx-import/tbx-for-filesystem-import/
   exists and is writeable for translate5
