

./translate5.sh config

The translate5.sh script (part of a translate5 installation) can be used to set the translate5 configuration (located in the Zf_configuration table) from the command line.

```
tlauria@tenforward ~/www/translate5-master $ ./translate5.sh help config
Description:
    List, get and set translate5 configuration values.

Usage:
    config [options] [--] [<name> [<value>]]

Arguments:
    name                The part of a configuration value name. If more than one config value is found, all are
listed.
    value                Value to be set for the configuration, only usable if name is concrete enough to find
only one configuration entry.

Options:
    -d, --detail        Show config details on listing
    -m, --modified      Show only modified values on listing
    --empty             Set the value to an empty string (which can not be given as set argument).
    -h, --help          Display this help message
    -q, --quiet          Do not output any message
    -V, --version        Display this application version
    --ansi              Force ANSI output
    --no-ansi           Disable ANSI output
    -n, --no-interaction Do not ask any interactive question
    -v|vv|vvv, --verbose Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and
3 for debug

Help:
    Tool to list, get and set translate5 configuration values - currently in Zf_configuration only.
    Modified values are shown bold in the simple listing.
```
