

Plug-in VisualReview: VisualReview

If the API changes in an incompatible manner this is listed explicitly in the "important release notes" section of each [releases changelog](#).

The VisualReview process is triggered automatically on translate5 task import. The file conversion-worker which will merge multiple source files to one file and convert this file to html file, and segmentation worker process which will link the target segment to its corresponding content in layout, are part of the import process.

Preconditions for the VisualReview to be started are:

- The VisualReview Plug-In must be active
- The layout files must be provided inside a zip package (in new folder in the zip import package called "visualReview". This folder is on the same level as the "workfiles" folder) or from the file upload field in the task creation form (there is a special field for this purpose)
- The layout file(s) must contain all content, that is contained in the bilingual data (SDLXLIFF, OpenTM2 xliif, etc.).

Special Task Import Parameter

The visual review adds the following parameters to the task import:

Name	Type	Info
visualReview	file	Adds a (single) file as the source for the visual review. If the import zip already contains a "visualReview" folder with review sources this file will be added to the ones provided in the zip. Filetype can be "pdf" or "html"
visualReviewHtml	string	An URL to a website that will be taken as a source for the visual review. The URL will be downloaded with all linked resources. Overwrites any sources provided via "visualReview" or in the import package. The provided URL has to be fully qualified like "https://www.translate5.net/en/translate5-open-source-translation-system/" and has to be accessible without login etc.
segmentMapping	string	(source target) Defines, if the visual review is mapped to the source or target of the segments. Defaults to "source".

Provides access to the segment mapping for the pages of a review-file of a task (relevant for PDF based reviews only)

URL:	editor/plugins_visualreview_visualreview/segmentmap
Available Methods:	GET
Parameters:	pages
Specialities:	return all mapped segment for the given pages
