

# Translate5 5.5.0 - 2021-09-30

[5.5.0] - 2021-09-30

## Important Notes:

A complete backup is highly recommended before this update!

### TRANSLATE-2623

All user-set themes different from "thriton" or "arria" are set to the translate5 default theme: thriton. From now on, there are only 2 available themes in the dropdown: Dark theme (Aria) and Default theme (Triton)

### TRANSLATE-1405 - new TermPortal

Due the new TermPortal all terminology data is migrated to a new database structure, this may run a long time depending on the size of the term databases. The progress can be watched in the translate5 system log.

The config values runtimeOptions.tbx.termLabelMap.\* are merged into one config runtimeOptions.tbx.termLabelMap

The config values runtimeOptions.tbx.termImportMap.\* (which maps custom to valid TBX term status value) are moved into a own configuration table. If the previously configuration was completely in DB all is fine, conversion is done automatically. If such config was still/again in installation.ini, then migration must be done by hand. Unknown status values are logged on TBX import.

In order to use the new TermPortal the corresponding plugin must be activated via CLI command: **`./translate5.sh plugin:enable TermPortal`**

## Added

### TRANSLATE-2302: Accept and reject TrackChanges

Plugin TrackChanges

- added capabilities for the editor, to accept/reject changes from preceding workflow-steps
- reduced tracking of changes in the translation step, only pretranslated segments are tracked
- by default, TrackChanges is invisible in the translation step
- the visibility of changes is normally reduced to the changes of the preceding workflow steps
- the visibility and capability to accept/reject for the editor can be set via the user associations on the task and customer level

### TRANSLATE-1405: TermPortal as terminology management solution

Introduced the brand new TermPortal, now completely usable as terminology management solution.

## Changed

### TRANSLATE-2629: Integrate beo-proposals for German names of standard tbx attributes

Term-portal improvement UI names of standard TBX attributes

### TRANSLATE-2625: Solve tag errors automatically on export

Internal Tag Errors (faulty structure) will be fixed automatically when exporting a task: Orphan opening/closing tags will be removed, structurally broken tag pairs will be corrected. The errors in the task itself will remain.

### TRANSLATE-2623: Move theme switch button and language switch button in settings panel

The drop-down for switching the translate5 language and translate5 theme is moved under "Preferences" -> "My settings" tab.

### TRANSLATE-2622: CLI video in settings help window

Integrate CLI video in preferences help page.

### TRANSLATE-2611: Check Visual Review URLs before downloading them if they are accessible

Added additional check for Visual Review URLs if the URL is accessible before downloading it to improve the logged error

## Bugfixes

### TRANSLATE-2621: Logging task specific stuff before task is saved leads to errors

In seldom cases it may happen that task specific errors should be logged in the time before the task was first saved to DB, this was producing a system error on processing the initial error and the information about the initial error was lost.

### TRANSLATE-2618: Rename tooltips for next segment in translate5

Improves tooltip text in editor meta panel segment navigation.

### TRANSLATE-2614: Correct translate5 workflow names of complex workflow

Improve the step names and translations of the complex workflow

### TRANSLATE-2612: Job status changes from open to waiting on deadline change

If the deadline of a job in a task is changed, the status of the job changes from "open" to "waiting". This is fixed.

**TRANSLATE-2609: Import of MemoQ comments fails**

HOTFIX: MemoQ comment parsing produces corrupt comments with single comment nodes. Add Exception to the base parsing API to prevent usage of negative length's

**TRANSLATE-2603: Browser does not refresh cache for maintenance page**

It could happen that users were hanging in the maintenance page - depending on their proxy / cache settings. This is solved now.

**TRANSLATE-2602: msg is not defined**

Fixed a ordinary programming error in the frontend message bus.

**TRANSLATE-2601: role column is not listed in workflow mail**

The role was not shown any more in the notification e-mails if a task was assigned to users.

**TRANSLATE-2599: reviewer can not open associated task in read-only mode**

If a user with segment ranges tries to open a task read-only due workflow state waiting or finished this was resulting in an error.

**TRANSLATE-2598: Layout Change Logout**

Changing translate5 theme will no longer logout the user.

**TRANSLATE-2591: comments of translate no segments are not exported anymore**

comments of segments with translate = no were not exported any more, this is fixed now.
