

Plug-in DeleteUserAssociations: DeleteUserAssociations

This plugin allows the user to be able to delete associated users to task which are not in his user hierarchy. For some situations it is useful to delete such user associations.

For example:

- in a workflow translators (for workflow step translator check) are added automatically to a task on task creation.
- The translators are not part of the PMs user hierarchy and can therefore not be manipulated.
- The task should no be translator-checked. In this case a the translator association should be removable by the PM.
