

Install direct dependencies

Translate5 needs several dependent third party software for several features.

For what you would expect from a translation management and editing system, you should install and use all of them except NEC-TM, which is deprecated and not recommended.

In the following chapters information for installing this dependencies is provided:

- [LanguageTool for SpellCheck-Plugin](#)
- [Okapi Longhorn - Usage for source file format conversion](#)
- [OpenTM2 Installation](#)
- [openTMSTermTagger](#)
- [WebSocket Server for FrontEndMessageBus Plug-In](#)
- [Install NEC-TM](#)
