Microsoft Azure cloud as OpenID server for translate5

Microsoft Azure cloud ActiveDirectory can be used to authenticate users for translate5.

If you wish, you can set up the same translate5 instance on different domains and configure for different clients different domains and different OpenID servers.

Follow all the below steps.

1. Necessary MS Azure cloud configurations
2. Assign the appropriate translate5 roles to your users in Azure
3. translate5 settings to use Azure Active directory as OpenID connect server
