Clients overview											
🖧 Add 💈 Refresh											
Client name	Client number 123456			translate5 domain:			For AD FS the OpenID Issuer				
kunde1						marc.translate5.net/	is the same URL as the				
asdfasdf	WW			0	penId C	onnect	OpenId serve	r URL			
defaultcustomer	default for legacy data			Openi	d server:	https://your-adfs-se	erverdomain.com/adfs/	/			
Enter the URL to which translate5 s			-	Openi	d Issuer:	https://your-adfs-se	erverdomain.com/adfs/				
authentication. For "AD FS" (Active Directory Federation Services) this should be the previously copied path of your "well-know config",					d user	70818ebf-3232-44fd-b6f5-f84ed164b0ad					
but stripped everything from ".well-known/" onwards and added the				Openl passw		2cDjZtirpoEL1rH56nVrID9jVtF1VvtLEcUbf-A6					
server domain and protocol at the s	tart.			OpenI URL:	d OAuth	https://your-adfs-se	erverdomain.com/adfs/.we	II-known/ope	enid-configur	rat	
Enter the URL to your "well-known"	config you prev	iously copied	,—		n roles:	Editor	InstantTranslate	🗌 Term	search		
but as before add the server domair	and protocol a	t the start.				Admin	API	D PM			

Check the translate5 system roles you want Azure	System roles:	Admin	Selitor	🕑 InstantTranslate
to be able to assign to the user. Other roles Azure will		🕑 Term search	API	PM
not be able to assign to the users Azure authenticates	Linked text on login page:			
Check this checkbox, if you do not want to show the translate5 login page, but instead in all cases want to	translate5. If	f this checkbox is not activa nect server on the login pa	ited, the text defined in the tex	rver if there is no user session in It box below will be linked to the
forward to Azure for login.	2	Save	Cancel	delete

Congrats! You are done. You can now log via your Active Directory Federation Services into translate5.

One important note: Since by default a gender is not specified in Active Directory, all users that are created via Active Directory in translate5 will be female. If you do not want that, you have to create a custom user attribute for your Active Directory users and assign that as a claim to your translate5 app within Active Directory in the way showed in the Active Directory configuration.

A second note: If you checked the last checkbox above, users are ONLY able to sign in via Azure on the domain, you defined for this client in its client configuration. On other domains of the same translate5 instance users will still be able to sign in via the login page.
